

## HOW TO MAKE . . . CHILLI OIL

As a bait designer I often get asked “How do I make?”

Chilli Oil is one that has been asked again recently so I thought I would put pen to paper in under 250 words and pictures just to demonstrate how you can make your very own Chilli Oil

### WHAT YOU WILL NEED

- \*Salmon Oil
- \*Crushed Chillies
- \*Kitchen Scales
- \*Measuring Jug
- \*Funnel Bottle
- \*Tea Strainer
- \*Liquids bottle (200ml)
- \*Water bottle (large)

**STEP ONE.** Weigh out 25g of crushed Chillies and pour them into your large bottle with the funnel then measure out 250ml of Salmon Oil and pour into the bottle, screw the lid on tight and give it a shake and leave for 24 hours or longer depending on how hot you want it and give it a shake every so often.

**STEP/ DAY 2.** Take your measuring jug and tea strainer and slowly sieve it through it will now read 200ml of oil tap the Chillies in to a tub and put to one side then repeat the sieving process again into your liquids bottle and label.

### JOB DONE...

Your very own Chilli Oil.... and all done and washed up before the wife gets home 😊

It is also worth adding 2 or 3 drops of Essential Black Pepper Oil to add a little more edge to the final mix.

All is left to do is give it a go.

*Have fun*
