

Summer Attractor Pack by Richard Seeds

The summer attractor pack is ideally suited to fishing in the warmer months. The idea behind this pack is that when water temperatures become warmer, the fish become increasingly active and use up more energy that will need to be replaced through feeding. As anglers, we want to capitalise on this by supplying high energy products in bait forms that will hopefully enable us to catch plenty of fish. To do this you need good quality bait that the fish will actively search out as part of their dietary requirement.

The summer attractor pack contains some of the most highly attractive pellets on the market; pellets which have a proven track record amongst many of the country's top anglers. These session packs are ideal for day sessions as you have everything you need 'bait wise' to get a bite.

The Summer Attractor pack contains:

- 5 or 10kg of Betaine Ultramix
- 500ml Trout/ Halibut Pellet Oil
- Pot of 40 Betaine HNV Hook baits
- A mixture of size pellets 4, 6, 8 and 11mm

Betaine Ultramix

This pellet blend contains a mixture of betaine-boosted halibut pellets of sizes 4, 6, 8 and 11mm. As the pellets are a mixture of sizes they break down over different periods of time, leaving a more 'active' bait area. They break down over 1-3 hours and do not fully dissolve, this means there will always be attraction in the area you are fishing. These pellets also contain squid and green lipped mussel extract in their natural forms.

Trout/Halibut Pellet Oil

This oil needs no introductions; it is an all time favourite amongst anglers alongside salmon oil. The great benefit with these oils is that they are used in a lot of today's commercial carp fisheries, where carp have been reared on pellets that contain them. As a result fish seem to have an in-built attraction towards them and any pellets that contain them. The oil seems to draw the fish in as it disperses into the water, is also PVA friendly and a brilliant addition to spod mixes.

Betaine HNV Hookbaits

These hook baits are designed to match the pellets, are high in oils and attractants, are pellet shaped and critically balanced in an attractive 12 x 16mm shape. A size 8 wide gape balances them perfectly. They are glazed in trout/ halibut oil to boost the attraction. I recommend freezing them between sessions so they are fresh each time they are used.
