

# Hemp 'n' Halibut Stick Mix

From CC MOORE

In the earlier days of 'the stick' we had to play around with lots of different types of ground baits etc to try and produce a blend of all the little goodies we wanted in our mixes to produce 'the' perfect mix.

That on its own was no easy task to get the perfect consistency and oil content, 'head achy' at times in fact, but thankfully CC MOORE have produced this, the New Hemp 'n' Halibut stick mix! The answer to all your stick fishing problems!

My first impression of the mix was very pleasantly surprising, it has a really light fluffy texture but with a nice course consistency thus lending it perfectly for you to add any of your own chosen tweaks in the form of oils, additives, pellets or liquid food supplements; the options are endless!

'Stick' fishing really can be an edge, especially with how fads in carp fishing change all the time with the inventions of all things new, but since this type of fishing has become somewhat neglected in recent times it could be a method that can certainly help you land more bonus fish.

As we all know every carp and coarse fish seems to love hemp, so with this product containing ground hemp meal, hemp protein powder and crushed hemp seeds that alone is a massive attraction package that fish find difficult resist. Then add in the huge attraction potential of ground halibut pellet meal and Mini Halibut Pellets and the mix packs a really explosive punch when compared to your ordinary standard mixes.

## **Tip**

The first time I mixed a batch of the hemp and halibut stick mix up I mixed it 50:50 with Salmon Microfeed (pellet) to really darken it down. Then to give it that little bit more attraction, I mixed it with the 30-40 ml of Liquid shrimp Extract instead of water to give it a deep, rich finish!

***Good enough to eat!***

***Benji***

Hemp 'n' Halibut Stick Mix is available from [www.ccmoore.com](http://www.ccmoore.com) and their stockists for:

1kg - £3.75,      3kg - £8.99,      5kg – 12.99
