

## BLUE CHEESE POWDER - Tim Richardson

Blue cheese powder is packed with proteins, amino acids, salts, oils and other vital nutrients and stimulants!

Try it in unique combinations as it enhances other ingredients and liquids foods, flavours in many ways, multiplying their impacts and differentiating your baits in advantageous ways. You might immediately think of using it with CC Moore Garlic Powder perhaps for winter; but what about using it in baits with Vanilla Extract Meal and Meggablend with Ultra Pineapple and Peardrop Essences for something completely different-often a new combination can produce stunning results!

It is great in pastes of course but will also boost ground baits, method mixes, spod and stick mixes etc.

Due to its soluble profile CC Moore Blue Cheese Powder can be applied in preparing naturally cheesy particle mix for example – just add it to your hot water and let it soak into your baits.

I find blue cheese powder is great in PVA bags with liquid food dampened pellets, crushed boilies, base mix powders and various additives/ingredients, particles and seeds. Stick/groundbait mixes containing Chilli Powder, Robin Red, the Meggablands, Garlic Powder, Cyprivit and Betaine have proven really effective for me throughout the year, to the extent where I nearly always carry some with me!
