SQUID POWDER - Tim Richardson

Squid Powder (Squid Flesh Meal) is a very potent additive - so rich in natural feeding triggers... It is a very distinctive additive and will really give your bait the edge, particularly if you use it as the main characteristic aroma and taste of your bait. It is one of those special substances that create a very strong feeding trigger all on its own. It is great used at low levels to boost the nutritional profile of all kinds of baits; even sweet or fruity baits as fish will certainly know it's present even as very low levels! As with other awesome feed-triggering substances like Feedstim XP Powder it very easily absorbs water. This characteristic makes your baits suck in water, very much more effectively releasing the dissolved substances in your baits and pulling excited fish to your hook!

Squid Powder is also brilliant in all kinds of dips, baits soaks and glugs and ground bait boosting liquids and particle preparations, and in boosting boilie and pellet base mixes and glugs etc and even flavouring meat baits.

Just one example of a glug using it might be Liquid Yeast plus Squid Powder and Feedstim XP Liquid with added Ultrasweet (intense sweetener) and Pure Betaine. Squid Powder is simply a stunning all year round winner and a winter great in every conceivable type of bait!
